

F6 — Wind field and the C2 attribution, Melbourne-Essendon Fields

AUS_VIC_Melbourne-Essendon.Fields.958660_TMYx.2011-2025 · 8,760 rows · 0 missing wind values · screened by tools/diagnostics/weather_integrity.py
Panels 3-6 are read from results/diagnostics/wind_stats_essendon.json; panels 1-2 are computed from the committed EPW wind column, whose annual aggregates are asserted against that file before plotting.

1 — Annual wind-speed distribution

2 — Mean wind speed by hour of day

3 — Mean wind speed by month, with the exact-zero share

4 — Wind speed on cooling-plant-on hours against the year

5 — Extra sensible cooling attributed by wind band

6 — The controlled experiment: one switch, nothing else changed
